sMRI Data Preprocessing

fMRIprep structural MRI Preprocessing Pipeline

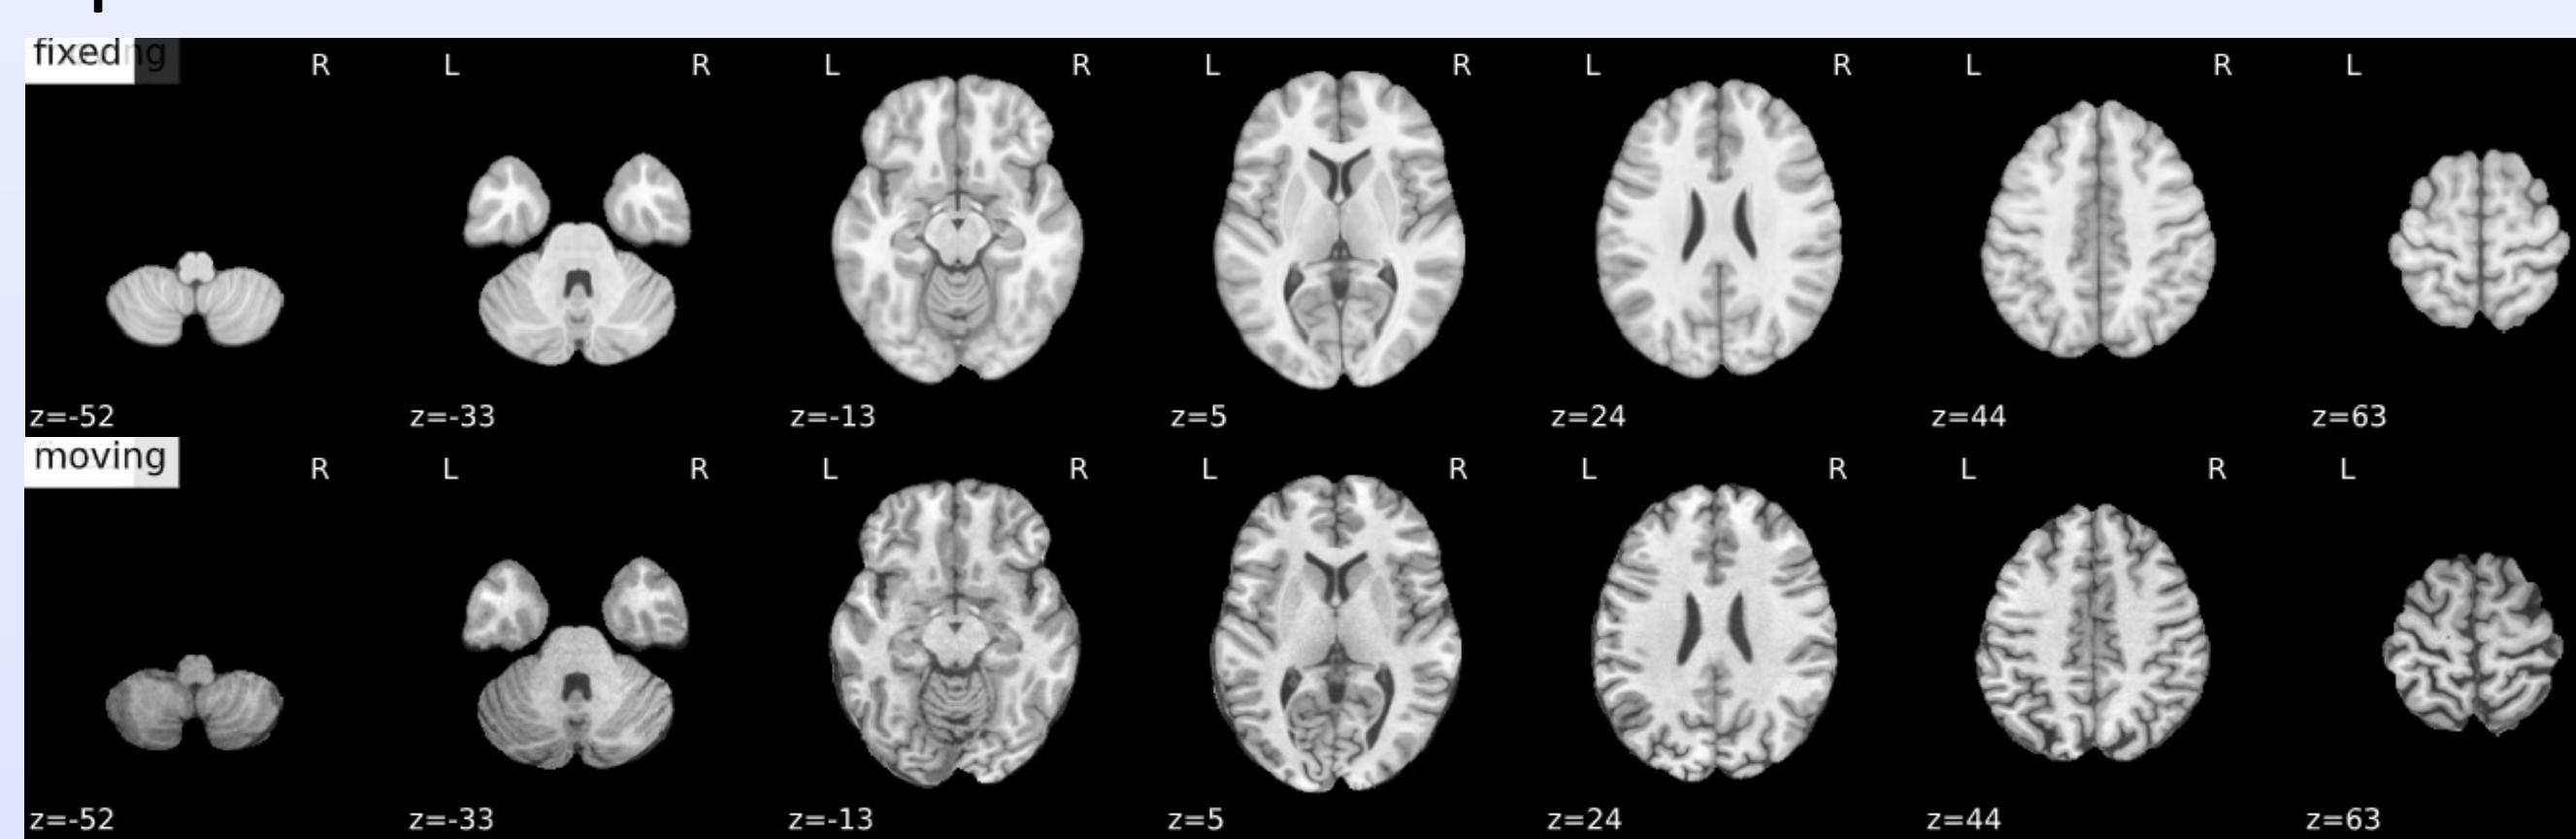

- Input: BIDS format, at least one T1w structural image
- Output: derivatives ready for analysis and visual quality assessment report for each subject

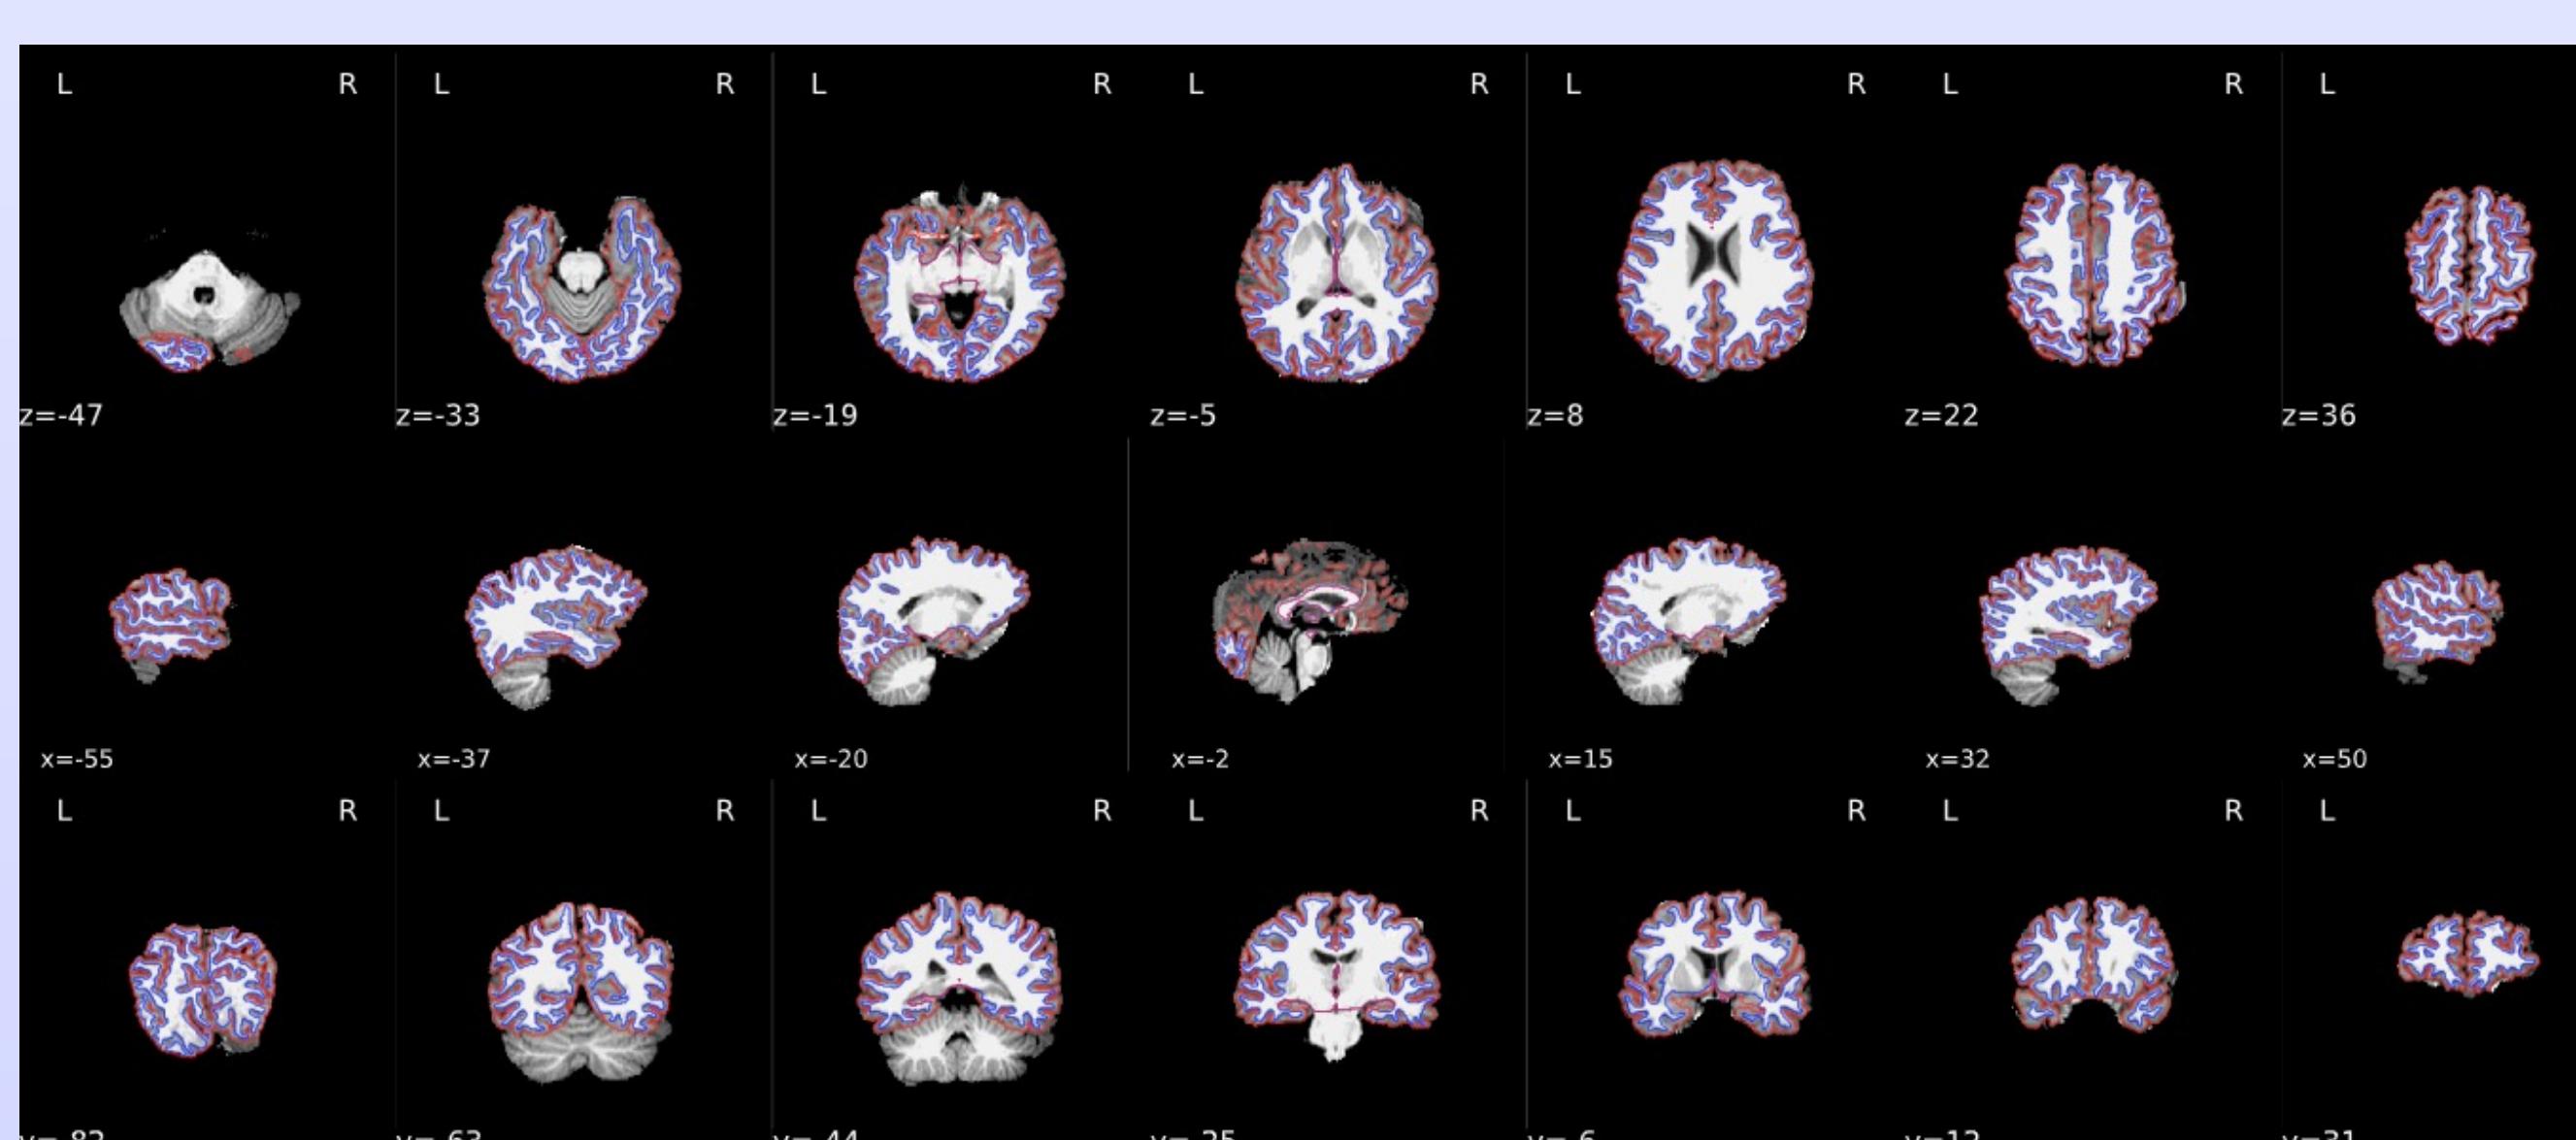

Brain Extraction & Segmentation

Spatial Normalization

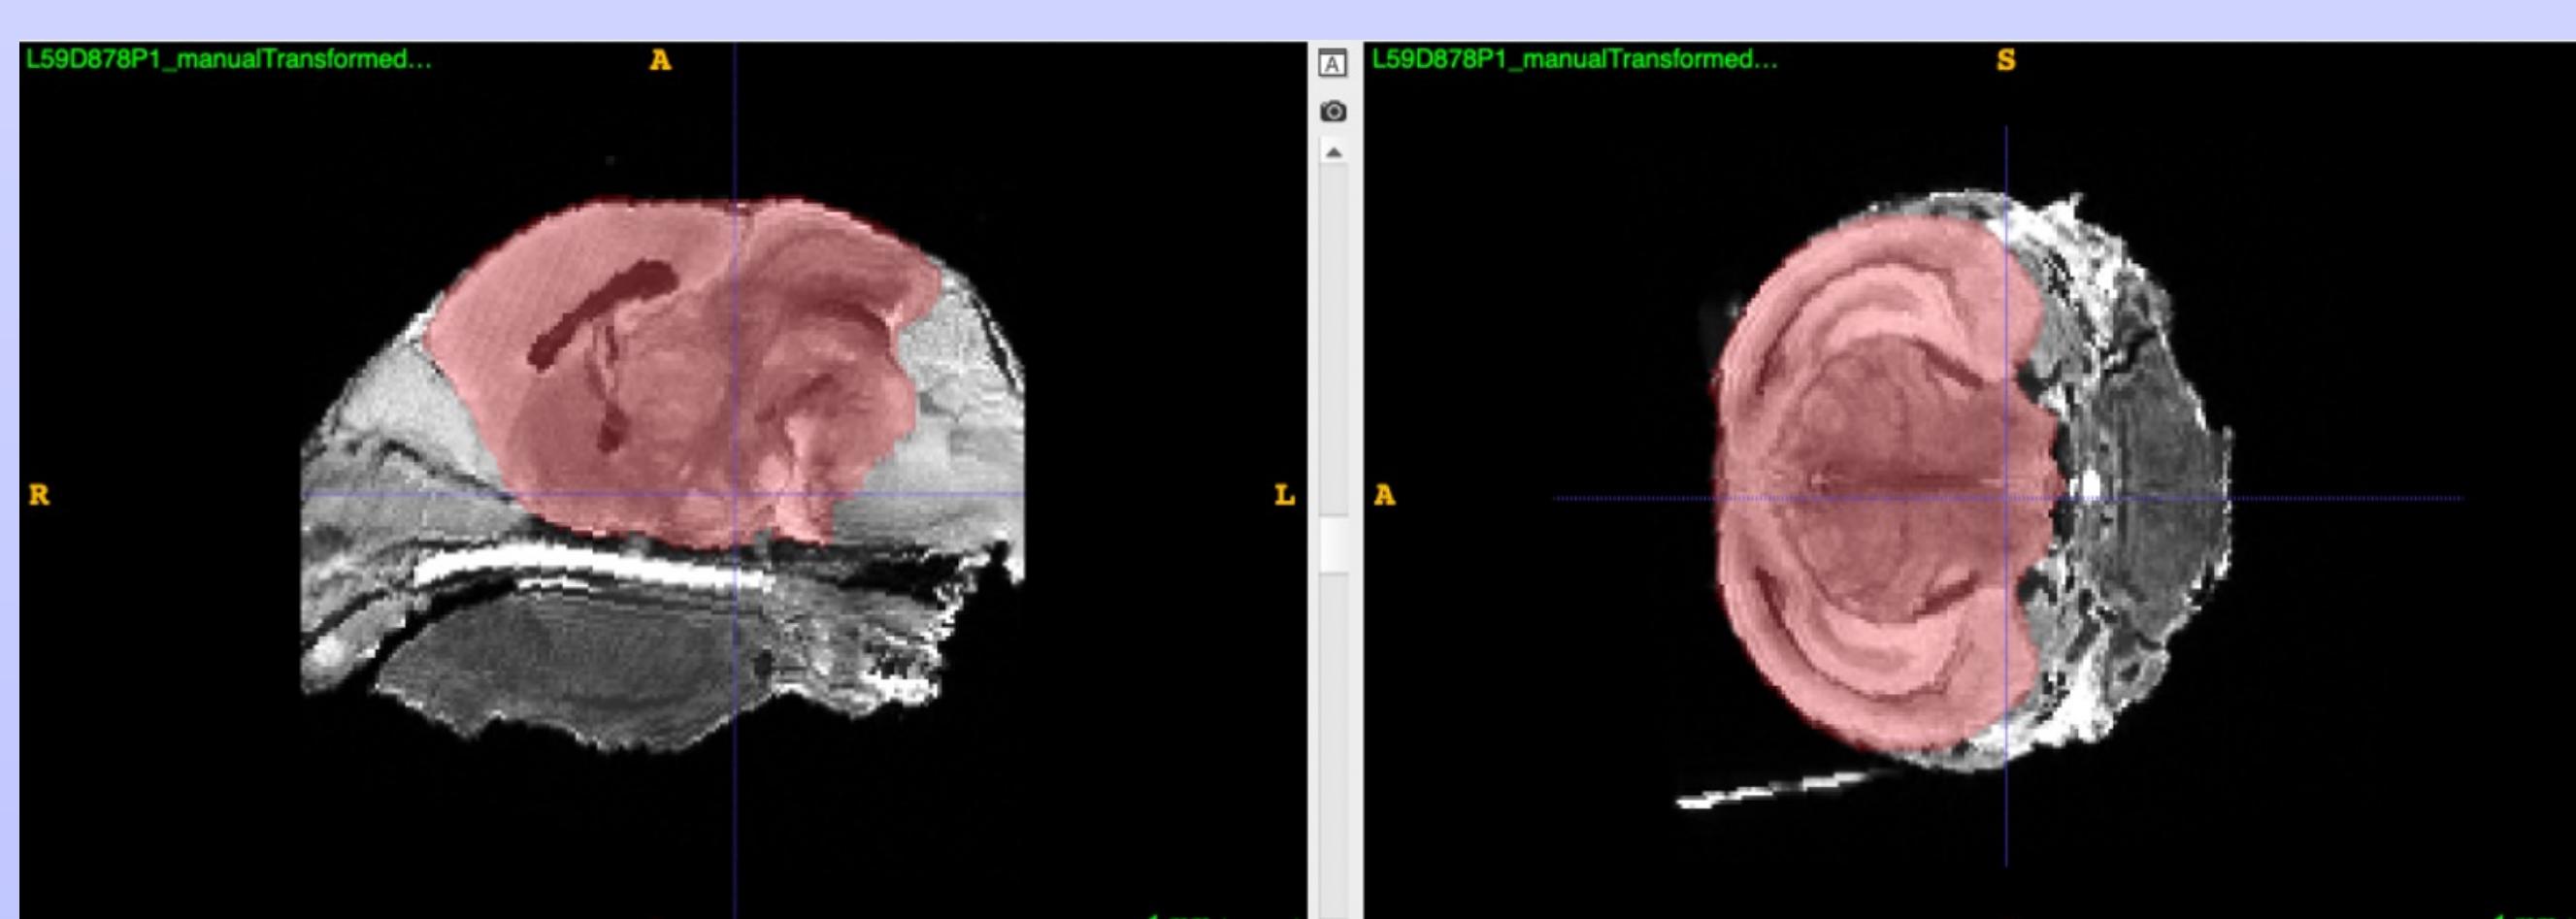

Surface Reconstruction

Brain Mask Refinement

- ITK-SNAP
- Manual Refinement

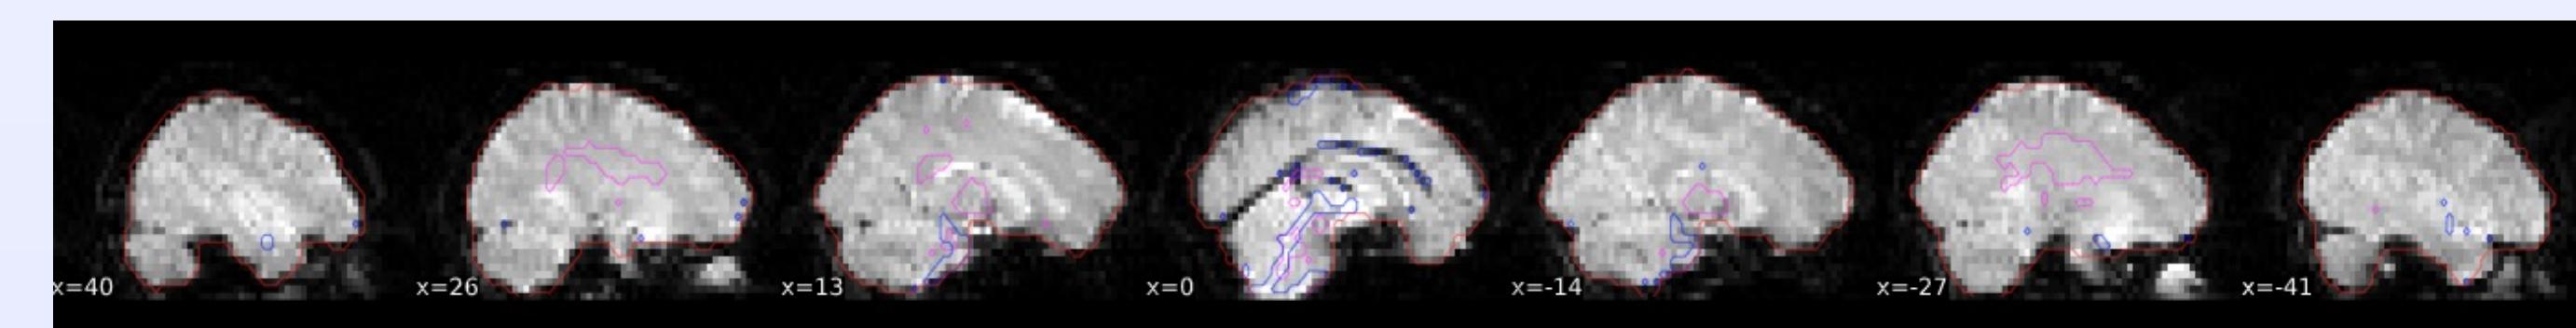

fMRI Data Preprocessing

fMRIprep functional MRI Preprocessing Pipeline

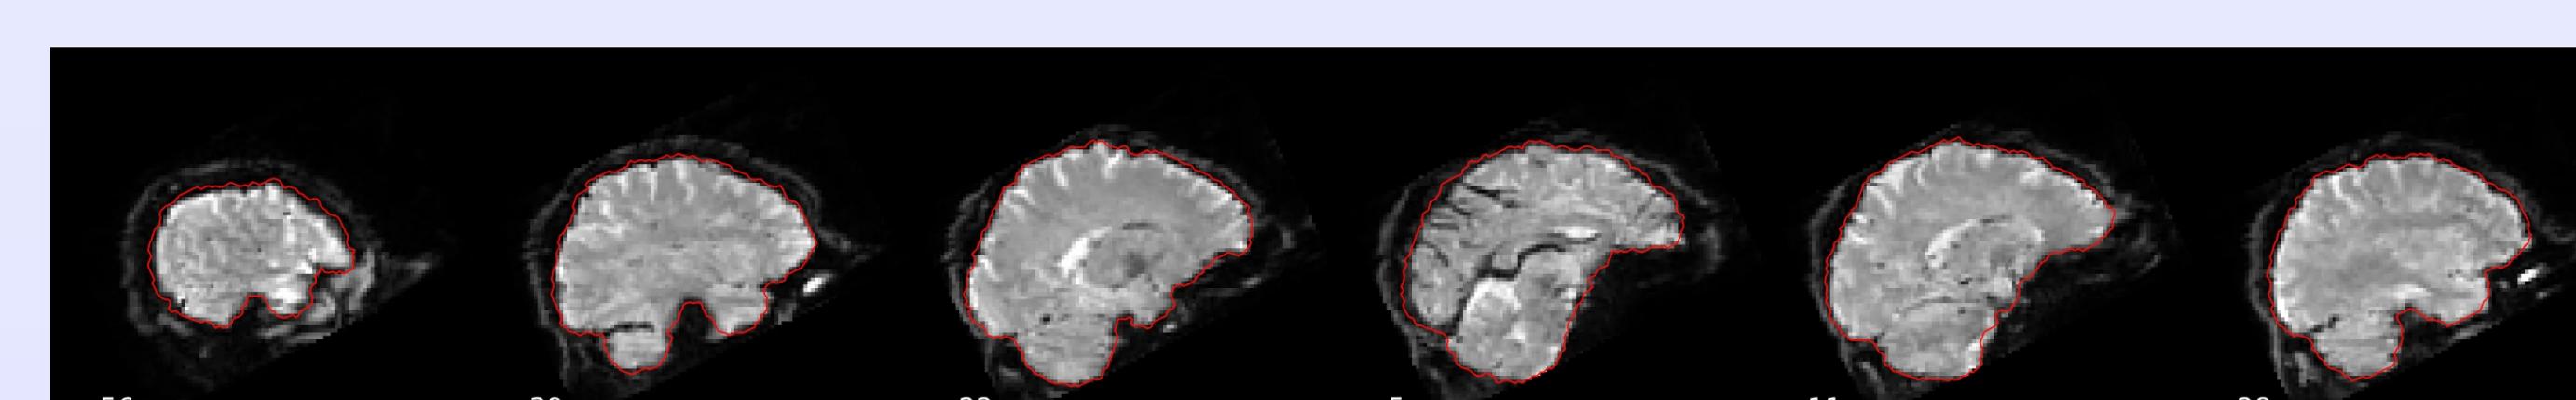

- Input: BIDS format, at least one T1w structural image, BOLD series
- Output: derivatives ready for analysis and visual quality assessment report for each subject

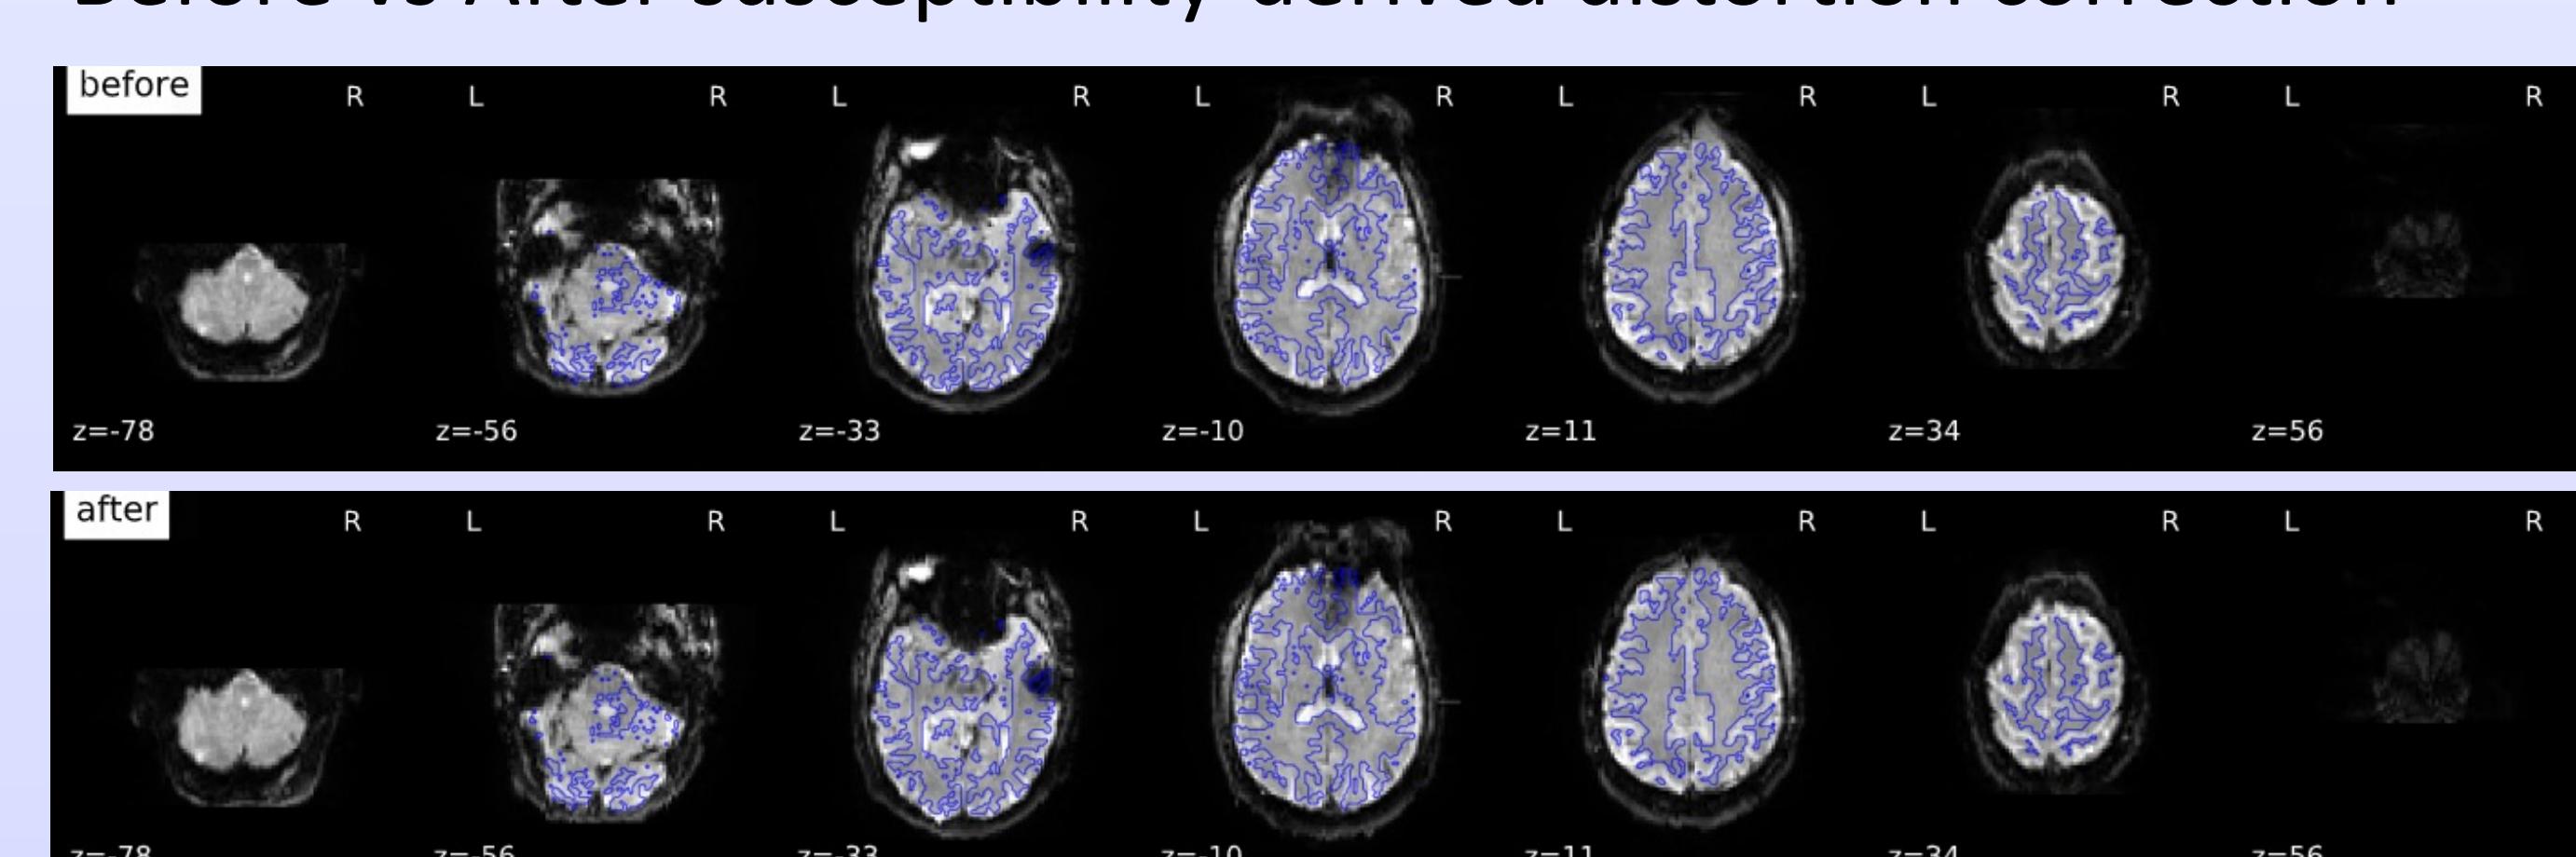

BOLD Reference Image Estimation

Calculation of a brain mask from BOLD series

Before vs After susceptibility-derived distortion correction

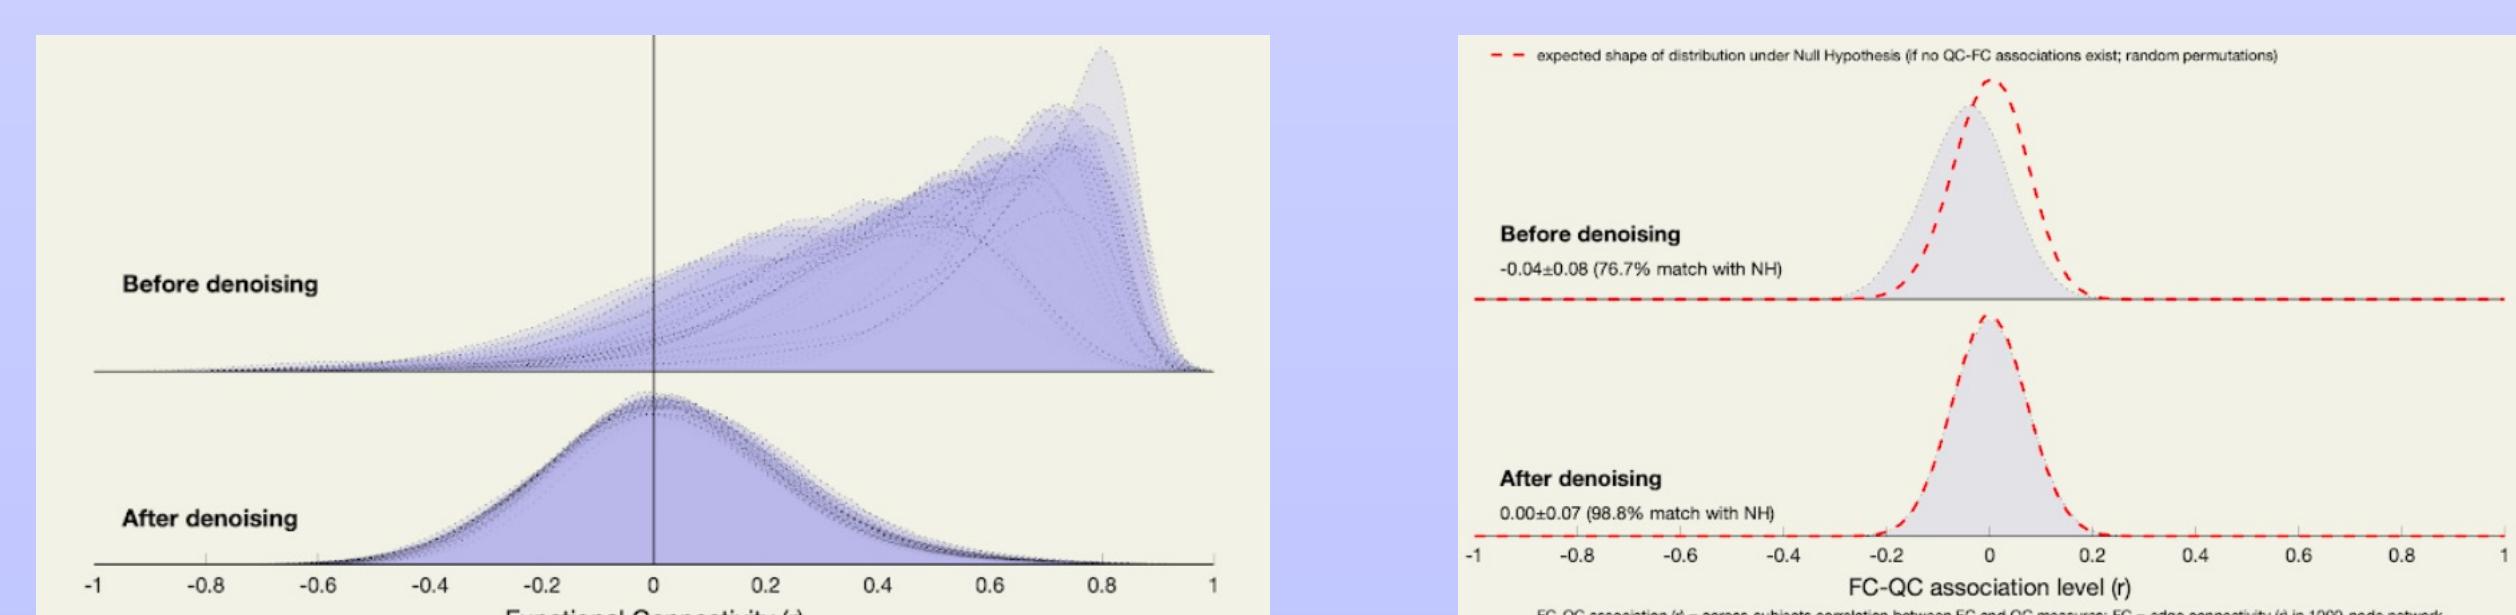

CONN Toolbox Denoising Pipeline

- Input: preprocessed data
- Output: denoised data
- fMRI Denoising Pipeline

Linear Regression

Distributions of FC Values and QC-FC Associations

Temporal Band-pass Filtering

Command-Line Arguments

The fMRIprep workflow takes as principal input the path of the dataset that is to be processed. The exact command to run fMRIprep depends on the Installation method. The common parts of the command follow the BIDS-Apps definition.
